

Remote Workforce Safety & Emergency Monitoring

Deploying GeoPro sends a clear message to regulators: Employee health and safety is paramount.

Lone worker safety is a significant concern for employers in the exploration sector. Personnel often work beyond the reach of traditional communication, conducting geophysical surveys, sampling, drilling, transporting explosives, or commuting to remote camps, and employers frequently have little visibility into their whereabouts or safety. Whether driven by the organization's general duty of care or the need to comply with health and safety legislation, employers must make reasonable provisions to ensure the safety of employees. Without affordable, reliable tools that enable employees to check-in with supervisors or request help in an emergency, the risks to both the individual and employer are significantly increased. It could result in heavy civil or criminal penalties or worse: loss of life.

GeoPro is an affordable solution that can be easily deployed to improve management's oversight of employees, aid legislative compliance and mitigate risk. By equipping field employees with the rugged *GeoPro Messenger*, employers minimize risk by ensuring that they can maintain contact, request help, complete check-ins and other routine tasks -- wherever they may be. And the GeoPro Web Application helps supervisors effectively monitor the location and status of employees (or contractors), manage emergency incidents or missed check-ins, and maintain a comprehensive audit trail for compliance reporting.

GeoPro provides ubiquitous coverage through the Iridium® satellite network, and more functionality than a satellite phone, two-way radio, PLB or one-way satellite messenger.

Unmatched Workforce Protection & Productivity for the Exploration Sector

GeoPro protects employees:

- Equips them with a reliable, global, two-way communications tool with emergency features.
- Provides confirmation that designated individuals received their emergency alert.
- Facilitates check-in tasks including automatic prompts if their check-in is overdue and automatic escalation to designated individuals if they fail to check-in as expected.

GeoPro helps employers:

- Monitor workforces and improve oversight with employee status and location displayed in a choice of web maps.
- Communicate with employees during emergency incidents, or any time, for added peace of mind.
- Define and assign check-in schedules and automate overdue check-in reminders.
- Locate others who may be in the vicinity of an emergency incident and able to provide assistance.
- Aid rescue efforts by sharing location coordinates and other critical insights with emergency responders.
- Monitor and manage emergency and missed check-in incidents more effectively, with dashboards and prompt notification of designated individuals via SMS, email or the GeoPro web application.
- Avoid misusing resources by automatically confirming that employee emergency alerts are not false alarms.
- Maintain a secure message and event audit trail to support investigations, compliance reporting or process improvement.
- Easily configure GeoPro to the organization's preferred safety and business practices.
