

Remote Workforce Productivity

**GeoPro improves
workforce productivity and
management oversight.**

- Two-way messaging.
- Emergency alert. Check-in.
- Personal tracking.
- Waypoints. GPS coordinates.

Maximizing the efficiency of field personnel is a key concern for many organizations. Dynamic and competitive forces put increased demand on employers to eliminate procedural delays, speed the flow of information and decision making, improve customer satisfaction levels and reduce costs. This can be especially challenging for employers with remote operations; often resulting in communication breakdowns, delays in obtaining field data for timely analysis, difficulty adjusting to last minute schedule or project changes, and little visibility of employee or contractor activities.

GeoPro can be deployed to maximize remote workforce productivity and improve management oversight. The solution includes GeoPro *Messenger*, a rugged two-way messaging device with GPS and global coverage, and a complete web application. Equipping employees with GeoPro *Messenger* speeds the flow of information, aids decision making, and eases the completion of routine tasks like check-in, activity reporting, or data collection. For supervisors, the GeoPro web application provides an effective means of monitoring field personnel using live GPS tracking data displayed in a web based map, and a reliable communications link with the field. GeoPro also includes tools to more effectively manage employee check-in or emergency incidents, maintain audit trails and configure business rules.

GeoPro provides ubiquitous coverage and more functionality than a satellite phone, two-way radio, PLB or one-way satellite messenger. Not only is GeoPro more functional it is also very affordable.

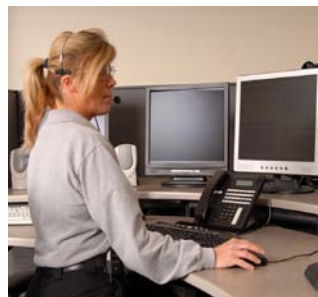

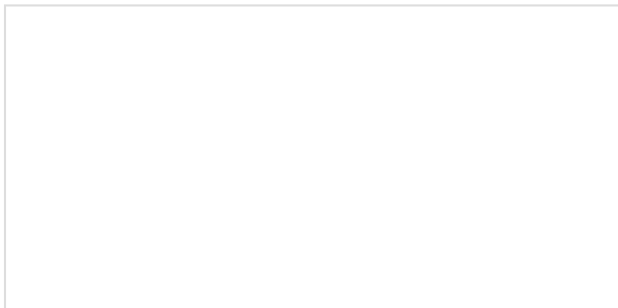

GeoPro improves remote workforce productivity

- Equips employees with a reliable two-way messaging tool with global coverage.
- Makes it easy to access communication, location, and productivity functions using a menu-driven interface.
- Facilitates timely updates about dynamic events like schedules changes or weather forecasts.
- Improves access to information to aid decision making.
- Makes it easy to complete routine check-in, reporting, or data collection tasks.
 - Report activities real-time. Examples: arrival on a worksite, task completion, ETA , or supplies required.
 - Easily collect geo-tagged field data and transmit it immediately for more timely analysis.

GeoPro helps employers

- Monitor remote workforces and improve oversight with live GPS tracking displayed in a choice of web maps.
- Obtain real-time updates and field reports for more dynamic decision making and operational agility.
- Improve field response and increase customer satisfaction by communicating schedule adjustments in real-time.
- Reduce field-office communication costs by sending job details or receiving field reports via SMS/text, rather than voice.
- Improve the location accuracy of field data collection activities, and speed analysis by receiving geo-tagged field data in real-time.
- Receive waypoints created in the field, and optionally publish them as a shared organizational resource.
- Automate and speed notifications for critical events like employee emergency alerts or missed check-in.
- Easily configure GeoPro to the organization's preferred business practices and rules.
