

# Remote Workforce Safety & Emergency Monitoring

GeoPro ultimately protects remote workers and the organizations they work for. Deploying GeoPro sends a clear message to employees and regulators: Employee health and safety is paramount.

Lone worker safety is a common concern for many organizations. Whether driven by the organization's general duty of care or the need to comply with applicable health and safety laws, employers must make reasonable provisions to ensure the safety of employees. When individuals work in remote circumstances beyond the reach of traditional communication, employers often have no way of knowing where employees are, and whether they are safe. Without affordable, reliable tools that enable employees to check-in with supervisors or request help in an emergency, the risks to both the individual and employer are significantly increased. It could result in heavy civil or criminal penalties or much worse: loss of life.

GeoPro can easily be deployed to improve management's oversight of employees, aid legislative compliance and mitigate risk. By equipping lone workers with the rugged GeoPro *Messenger*, employers minimize the risk for employees by ensuring they can maintain contact, request help, and perform check-ins and other field tasks -- wherever they may be. And the GeoPro Web Application helps supervisors monitor employee status and location, manage emergency events, and maintain an audit trail for compliance reporting.

GeoPro provides ubiquitous coverage and more functionality than a satellite phone, two-way radio, PLB or one-way satellite messenger. Not only is GeoPro more functional it is also very affordable.

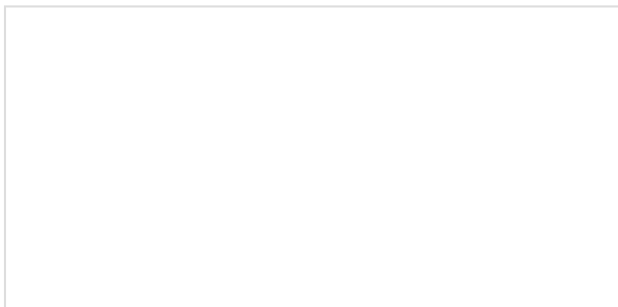

## GeoPro helps to safeguard employees working remotely or alone and

- Equips them with a reliable, global, two-way communications tool with emergency features.
- Provides confirmation that designated individuals received their emergency alert.
- Facilitates check-in tasks including automatic prompts if their check-in is overdue and automatic escalation to designated individuals if they fail to check-in as expected.

## GeoPro helps employers

- Monitor workforces and improve oversight with employee status and location displayed in a choice of web maps.
- Communicate with employees during emergency incidents, or any time, for added peace of mind.
- Define and assign check-in schedules and automate overdue check-in reminders.
- Locate others who may be in the vicinity of an emergency incident and able to provide assistance.
- Aid rescue efforts by sharing location coordinates and other critical insights with emergency responders.
- Monitor and manage emergency and missed check-in incidents more effectively, with dashboards and prompt notification of designated individuals via SMS, email or the GeoPro web application.
- Avoid misusing resources by automatically confirming that employee emergency alerts are not false alarms.
- Maintain a secure message and event audit trail to support investigations, compliance reporting or process improvement.
- Easily configure GeoPro to the organization's preferred safety and business practices.

Contact your GeoPro authorized distributor to find out how the GeoPro solution can be applied to address your workforce safety and productivity concerns.
